

# CT ABDOMEN AND PELVIS REPORT - SARAH WILSON

Report ID: CT-2024-001238 | Date: 12/18/2024

## PATIENT INFORMATION

Name: Sarah Elizabeth Wilson      DOB: 05/08/1972  
MRN: 456789012      Study Date: 12/18/2024  
Referring Physician: Dr. Jennifer Martinez, MD - Gastroenterology  
Clinical History: Chronic constipation and abdominal pain for 4 months

## TECHNICAL INFORMATION

Scanner: Siemens Somatom Force 128-slice  
Protocol: CT Abdomen and Pelvis with IV contrast  
Contrast Agent: Iohexol 100ml IV  
Sequences: Pre-contrast, arterial phase, portal venous phase  
Slice Thickness: 3mm

## FINDINGS

### LIVER:

Liver is normal in size and contour. No focal lesions identified.  
No evidence of hepatic steatosis or cirrhosis.  
Portal vein and hepatic veins are patent.

### GALLBLADDER AND BILIARY TREE:

Gallbladder is normal in size and wall thickness.  
No gallstones or biliary ductal dilatation.  
Common bile duct measures 4mm (normal < 6mm).

### PANCREAS:

Pancreas is normal in size and contour.  
No pancreatic masses or ductal dilatation.  
No evidence of pancreatitis.

### SPLEEN:

Spleen is normal in size (12cm in length).  
No splenic lesions or infarcts.

### KIDNEYS AND ADRENALS:

Both kidneys are normal in size and position.  
No renal masses, stones, or hydronephrosis.  
Adrenal glands are normal in size and appearance.

### GASTROINTESTINAL TRACT:

Stomach: Normal wall thickness, no masses or ulcers.  
Small bowel: Normal caliber and wall thickness.  
Colon: Mild wall thickening in the sigmoid colon.  
No evidence of obstruction or perforation.

### MESENTERY AND PERITONEUM:

No mesenteric masses or lymphadenopathy.  
No free fluid or air in the peritoneal cavity.

### PELVIS:

Uterus and adnexa are normal in appearance.  
No pelvic masses or fluid collections.
